

Progressive Cavity Pump Speed Variators & Gearboxes

Greetings!

When Progressive Cavity Pumps need quiet, reliable variable speed variation, but an AC inverter is not an option, look at mechanical variable speed drives by SITI. There's no complicated electrical wiring, no wash-down problems, and no complicated manual to study before using. Increase or decrease speed, just turning a knob while operating. SITI's MK Series is a simple solution that is easy and affordable. It requires very little maintenance, comes in 7 Sizes, with over 200 different design configurations. Input powers from fractional to 15 HP. Output speeds can be brought to ZERO, while the motor is still running, with an optional differential device. Standard output flanges allow easy mounting to your existing gearbox or motor, or us one of SITI's standardized gear solutions for a compact, reliable, cost effective solution.

5:1 variable speed range
Fixed gear outputs up to 40:1
Up to 85% efficiency
No cooling issues
RAL 5010 Epoxy Paint Standard

Interchangeable - Flexible Mounting - Quiet
Light Weight - Cost effective - Strong
High Dynamic & Static Loads
100% Italian Made
Discounted Package Pricing

SITI Power Transmission USA is located in Littleton, Massachusetts. We are a wholly owned subsidiary of SITI Riduttori, in Bologna Italy. We manufacture Worm, Planetary, Helical and Bevel-Helical Geared units. SITI's 51 years of gear manufacturing excellence is now available from U.S. stock to service the American Market.
